

# IMPROVE HUMAN CAPITAL MANAGEMENT PRODUCTIVITY IN THE CLOUD

## Our Platform and Google for Work

We are working together with Google, combining the power of Google's cloud-based productivity suite, Google for Work, with our cloud-based Human Capital Management (HCM) solution. Our innovative software development relationship will help our customers manage their workforce with familiar, intuitive Google productivity tools that make it easier for workers to create, communicate, and collaborate. As a Google for Work Partner, we now have one more way to help organizations boost productivity, increase employee engagement, and improve workplace efficiency.

Our customers who use Google for Work will be able to seamlessly integrate tools their employees use every day — such as Gmail, Drive, Sheets, Forms, Sites, and Calendar — with our HCM platform. Mobile, collaboration, data collection, storage, and reporting capabilities will be enhanced by access to the all-in-one Google for Work suite that lets you get work done from anywhere on any device. Integrated features will continue to be developed, including single sign-on.

Google for Work  
Partner

## CALENDAR

Employee work schedules created on our HCM platform are automatically and instantly synced to employees' individual Google calendars. Team members aren't forced to wait until the schedule is physically posted to see assigned shifts. Last-minute changes are rapidly communicated, minimizing confusion.

## DRIVE

HR reports, timesheet data, payroll information, and other human capital management documents from our HCM platform can be safely and securely saved to Drive, enabling easy sharing of key data anywhere, at any time, with the stakeholders who need it. Key reports are externally backed up for increased peace of mind.

## SHEETS

To save time, spreadsheets are seamlessly shared between our HCM platform and Sheets without the need to convert file formats. Employees can collaborate faster, avoid legacy formats, and easily view data from any device, on their own schedule.

## FORMS

Use Forms to easily capture data updates from employees and import that data directly into our HCM platform. Employees can access forms directly from an email or text link, and quickly complete needed updates on their mobile device or a desktop.

## MAPS

Enhance recruiting and hiring by letting applicants calculate potential commute times from their home to the job location. List job openings with organization-specific information on Map pins and identify geographic talent pools to hire more efficiently and effectively. Also, plot employee punches on a map to monitor mobile workers for potential abuse.

## Bringing a Consumer Focus to Business Technology

Both our customers and Google for Work customers will benefit from the integration of our platform and Google for Work with improved HR, recruiting, talent management, compliance, and workforce management processes. Organizations will be able to better engage their entire workforce — from office employees to remote workers — through familiar Google tools and mobile devices. Both platforms are committed to continuing to develop integrated features, and encourage customers to submit innovative ideas across the entire Google for Work suite.
